# Aalborg at the Fjord – 160,000 inhabitants

# Aalborg University

Established 1974

14,000 Students, 1200 Faculty Staff

**Faculty of  
Engineering, Science, Medicine  
6,000 Students**

## **Department of**

- Civil Engineering
- Building Technology & Structural Engineering
- Chemistry and Applied Engineering Science
- Electronic Systems
- Production
- Physics
- Energy Technology
- Mechanical Engineering
- Computer Science
- Mathematical Science
- Life Sciences
- Architecture and Design
- Development and Planning
- Health Science and Technology

**Faculty of  
Social Science  
4,500 Students**

## **Department of**

- Social Studies & Organisation
- Economics, Politics and Public Administration
- Business Studies

**Faculty of  
Humanities  
3,500 Students**

## **Department of**

- History, International, and Social Studies
- Music and Music Therapy
- Communication
- Languages and International studies

# The General Structure of University Studies

## 3 + 2 + 3

**Doctor level**

**4. Ph.D. thesis – three years**

**Master level**

**3. Second specialisation – two years**

**Bachelor level**

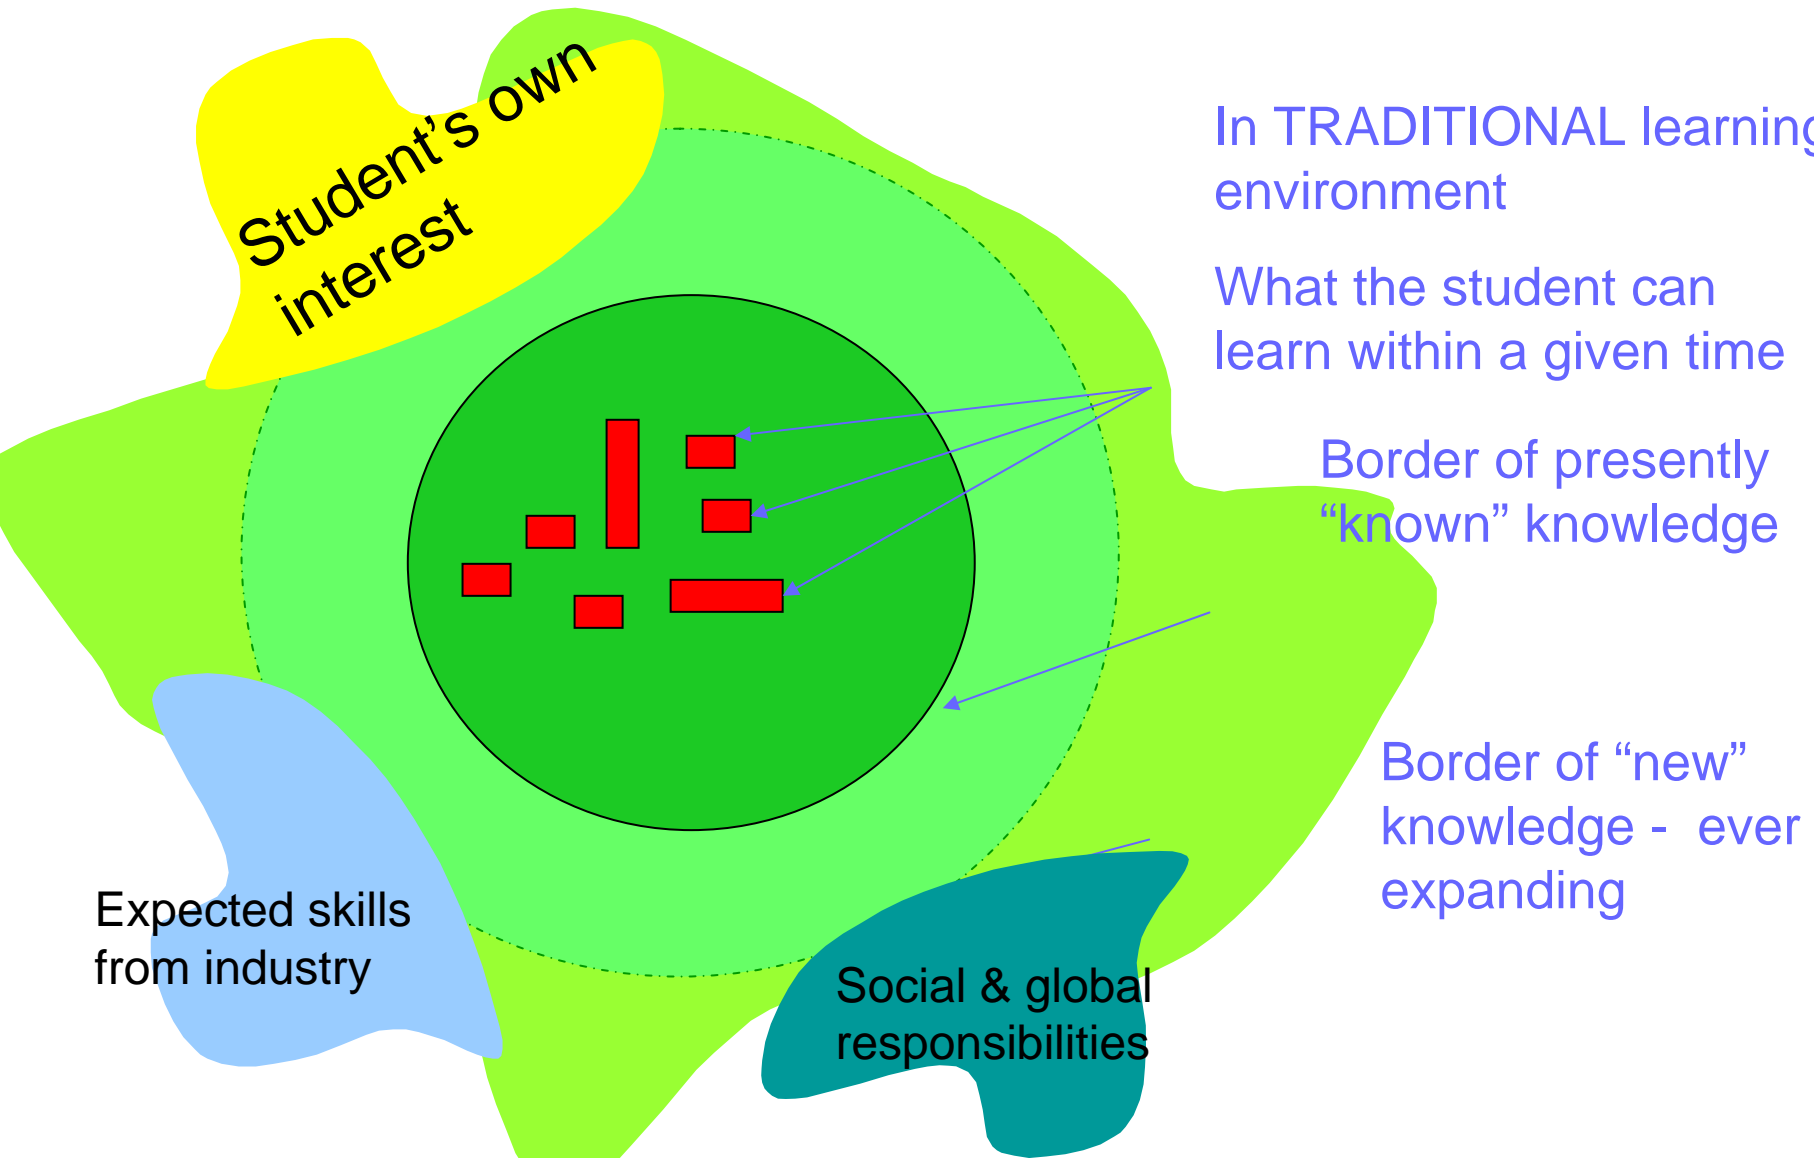

**2. First Specialisation – two years**

**1. Basic study Year – one year**

# Why change: Diversity of engineering competencies

# Why change: Challenges for the curricula

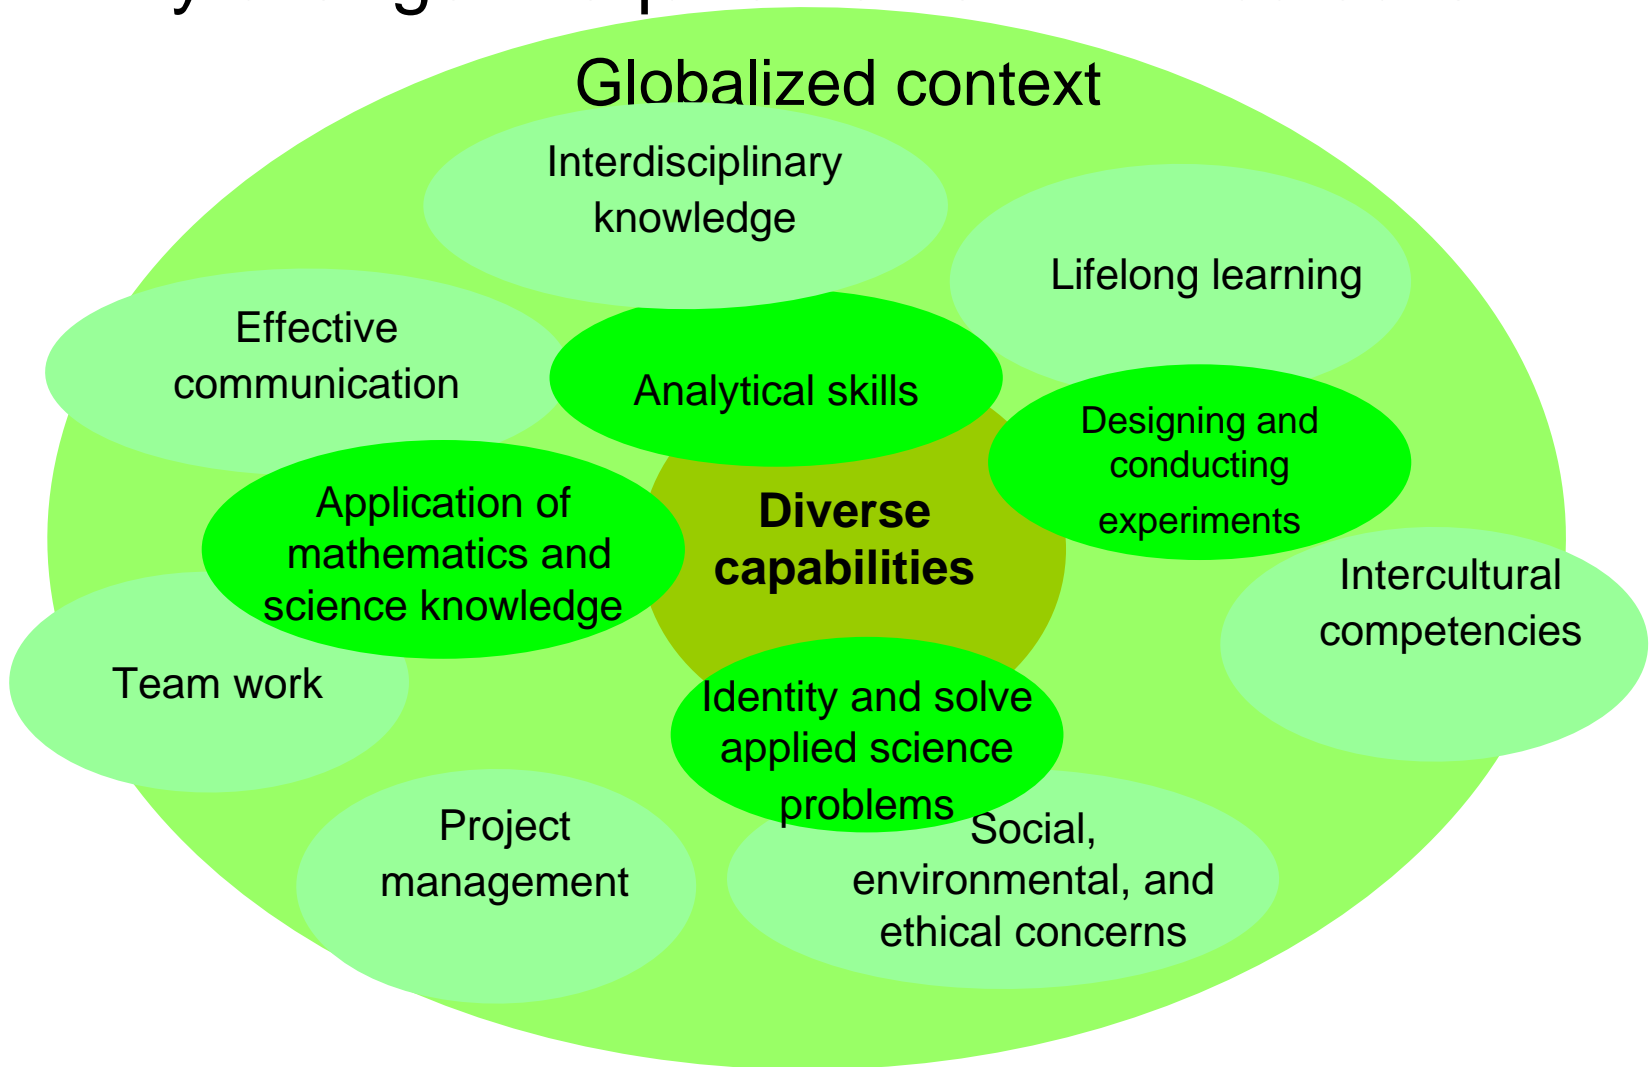

# Why Change: overfed students

# Why change: Requirements from Accreditation

- National Academy of Engineering, *The Engineer of 2020*, 2004
- **EUR-ACE (Accreditation of European Engineering Programmes and Graduates)**, [http://www.feani.org/EUR\\_ACE/EUR\\_ACE\\_Main\\_Page.htm](http://www.feani.org/EUR_ACE/EUR_ACE_Main_Page.htm)
- ABET: <http://www.abet.org/>

# Why change: Requirements from Accreditation

	First Cycle graduate	EUR-ACE: Personal Programme Outcomes for the bachelor level
1.	<b>Individual and Team work</b>	Function effectively as an individual, and as a member or leader in diverse Engineering teams.
2.	<b>Communication</b>	Communicate effectively on <i>intermediate</i> engineering activities with the engineering community and with society at large, by being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions
3.	<b>The Engineer And Society</b>	Demonstrate understanding of the societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to engineering practice.
4.	<b>Ethics</b>	Understand and commit to professional ethics and responsibilities and norms of engineering practice.
5.	<b>Environment and Sustainability</b>	Understand the impact of engineering solutions in a societal context and demonstrate knowledge of and need for sustainable development.
6.	<b>Project Management and Finance</b>	Demonstrate an awareness and understanding of management and business practices, such as risk and change management, and understand their limitations.

# Why change: expectation from industry

Comparison of capabilities taught at universities and required in professional life by young professionals - Germany

Figure 4 Comparison of capabilities taught at universities and required in professional life by young professionals [7]

(Becker 2006)

# Why change: expectation from industry

Ranking of capabilities important in professional life by young electrical engineers five years after graduation - Germany

Figure 5: Ranking of capabilities important in professional life by young electrical engineers five years after graduation [3]

## Teaching = Learning?

“Teaching does not mean transferring knowledge but creating opportunities for learning...producing and constructing it.” (Paulo Freire)

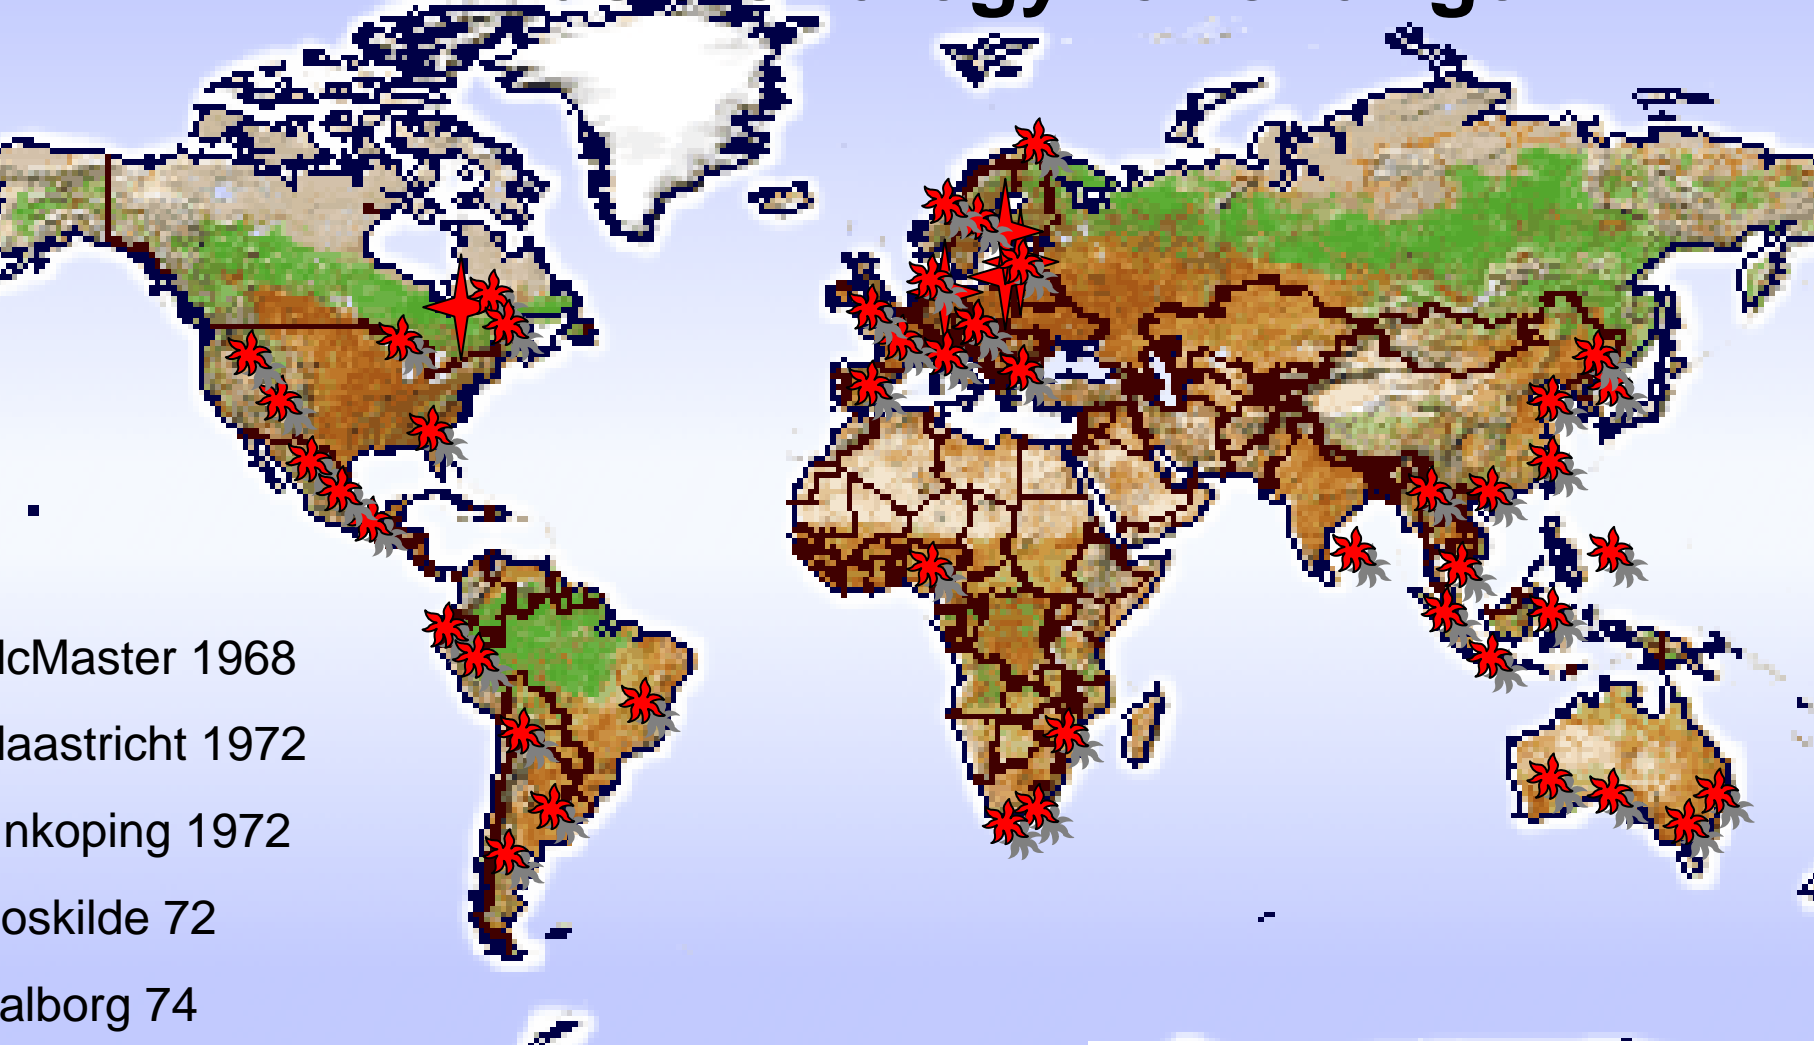

# Educational changes in Denmark

- New study programs: enriched engineering disciplines
- New expectations: broadened engineering skills and competences
- New study forms: implementing student centred and work place-imitated learning environment (for example, PBL as an educational strategy)

New challenges and tasks for educators

# PBL as a strategy for change

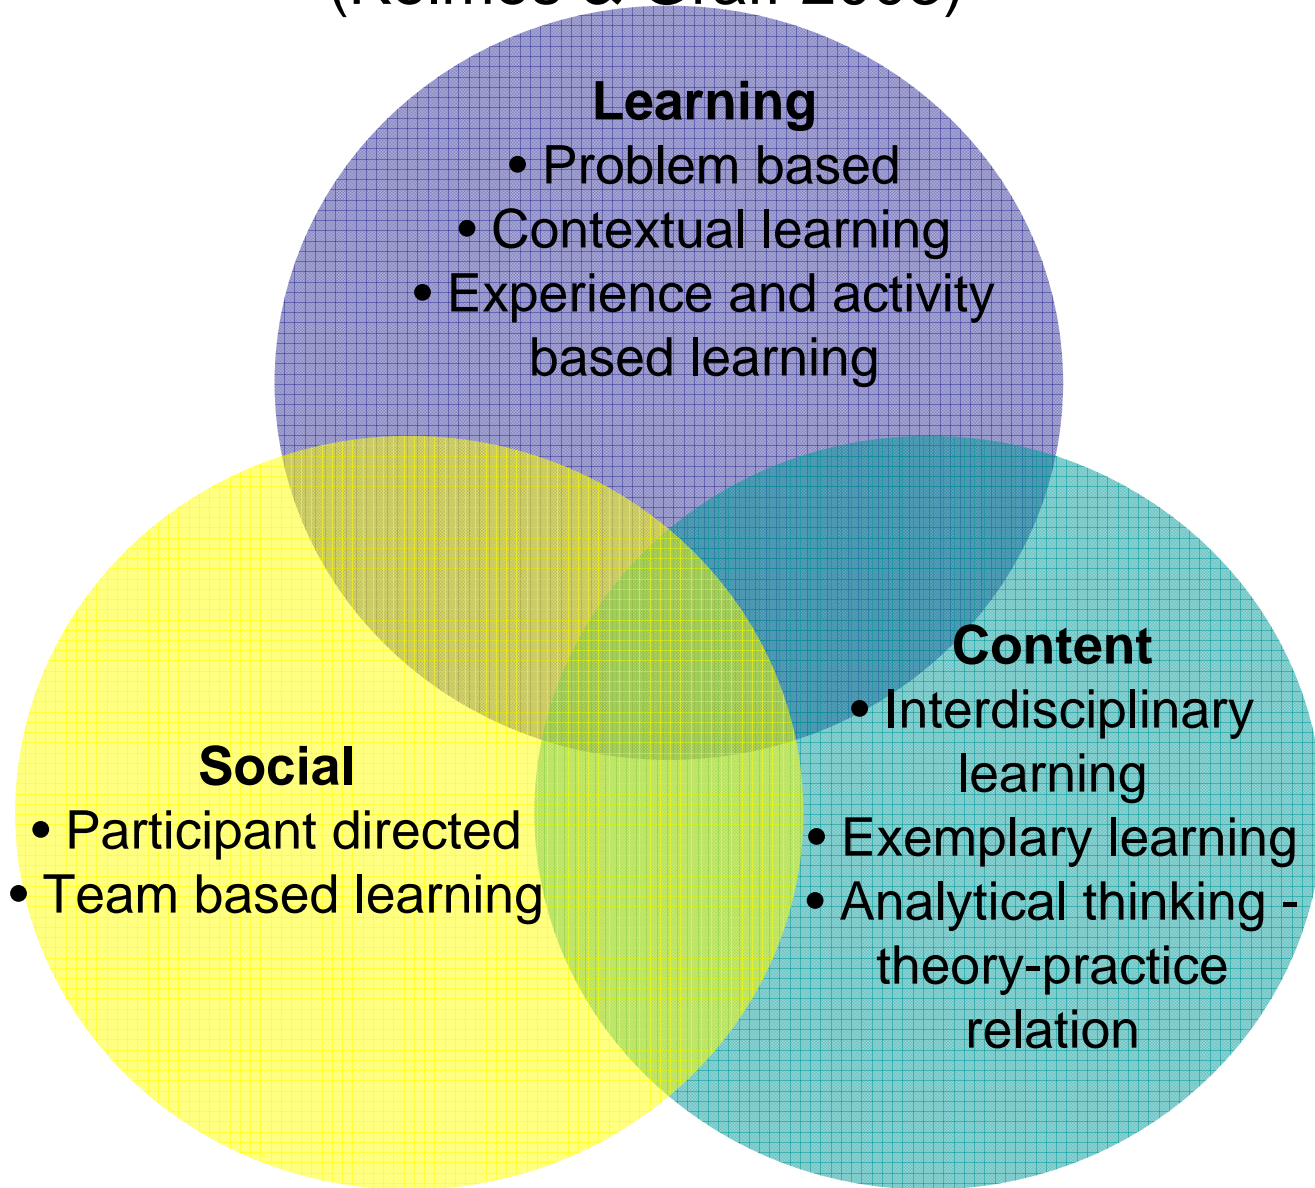

Problems as focus and stimulus for learning  
Self directed learning  
Student-centred and tutors as facilitators/guides  
Team work

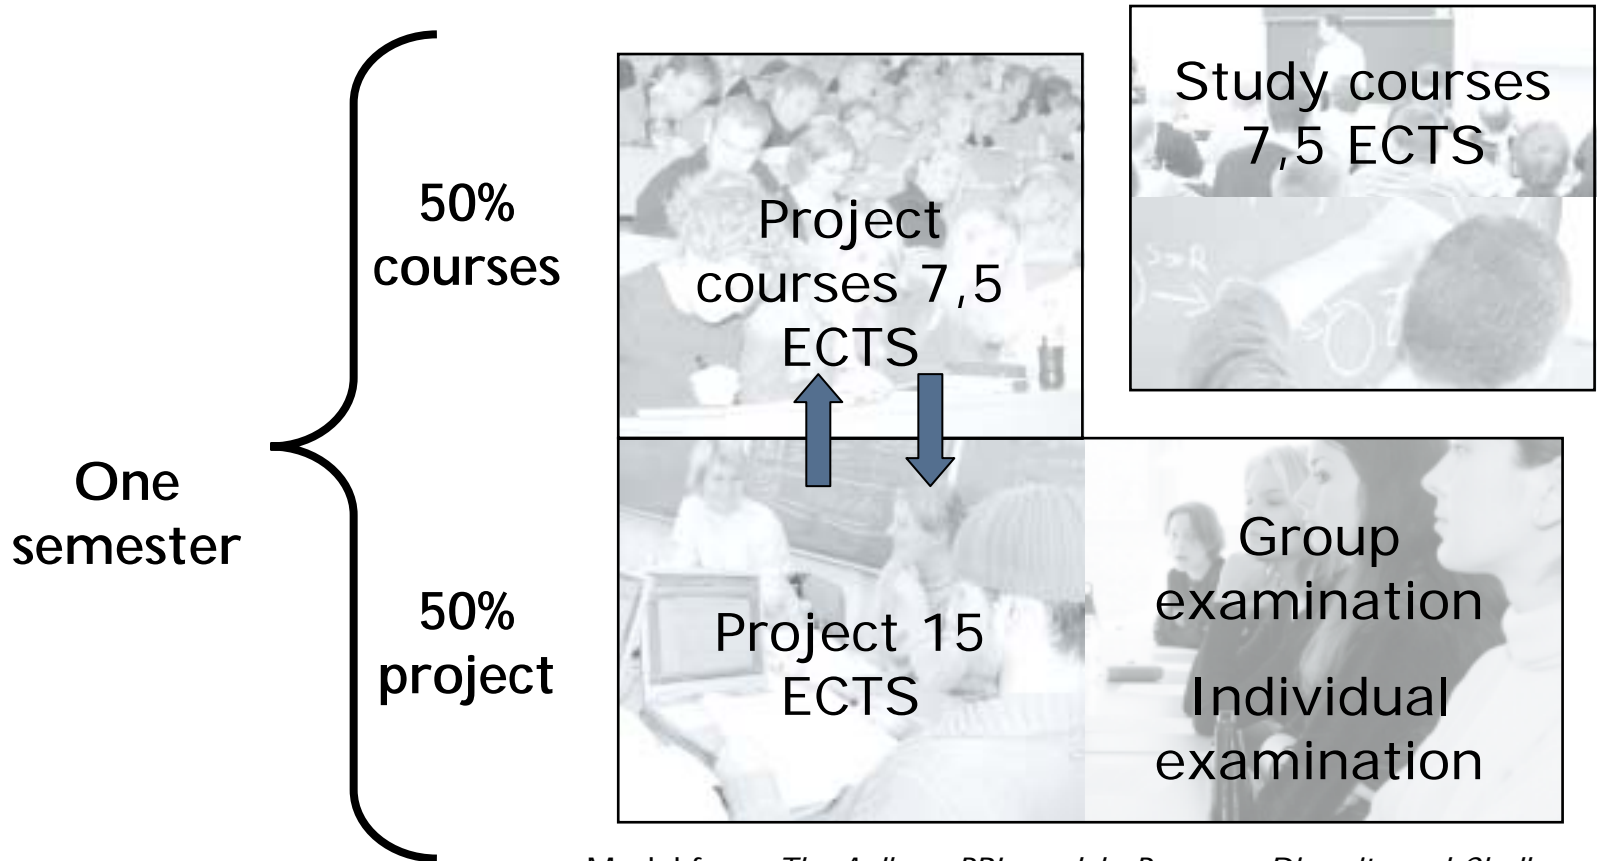

- Problem orientation
- Interdisciplinarity
- Exemplary learning
- Participant directed
- Group work

# PBL Learning Principles

(Kolmos & Graff 2003)

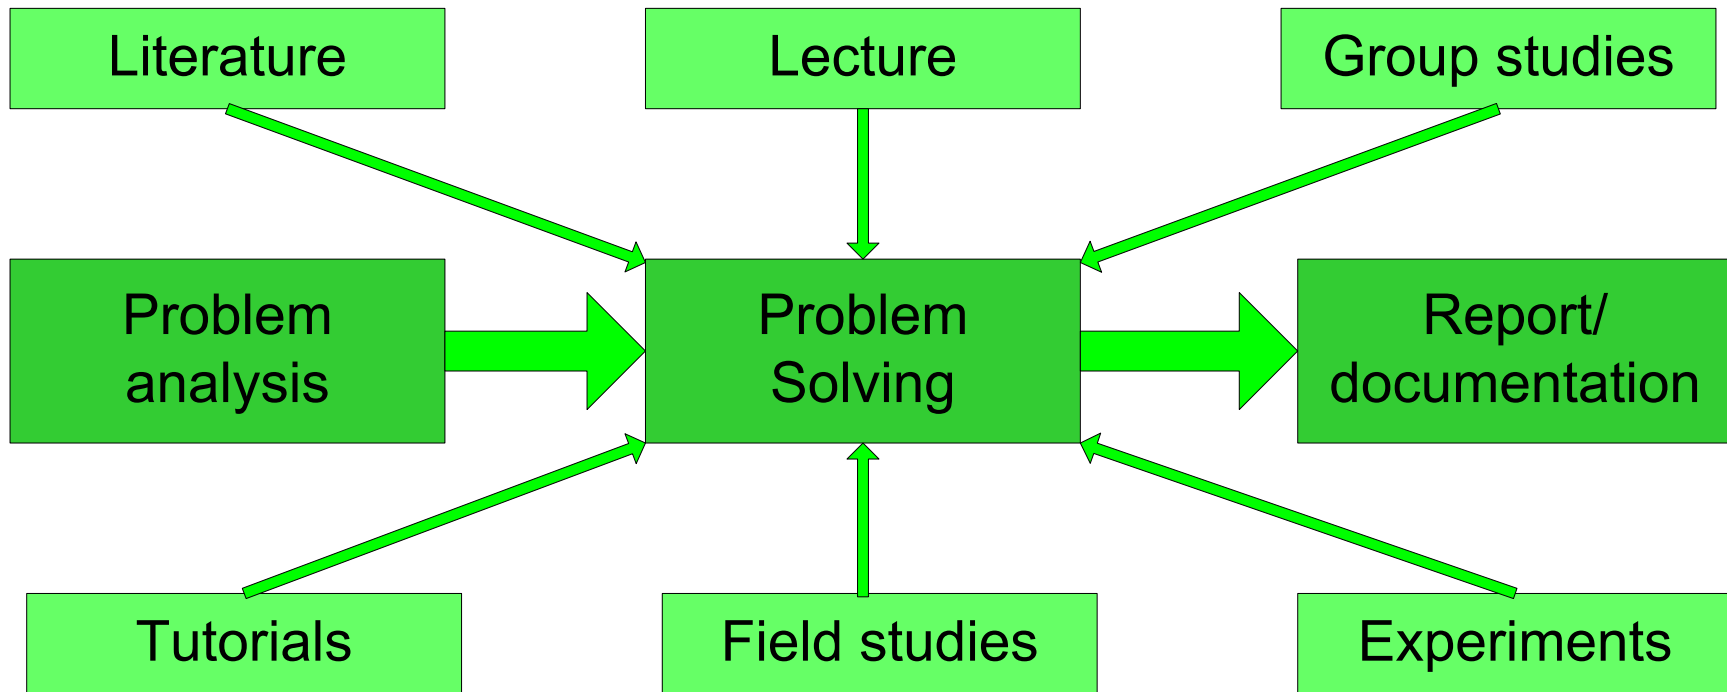

# PBL Aalborg Model

Model from *The Aalborg PBL model - Progress, Diversity and Challenges*  
Anette Kolmos, Flemming K. Fink & Lone Krogh

1 ECTS (European Credit Transfer System) = 30 working hours

# PBL Aalborg Model: Principles

‘The Aalborg Experiment – project innovation in university education’ - Kjaersdam & Enemark (1994)

Group formation.  
(by students based on interest)

Each group a project room

Group size: 6-8 1st year  
4-5 middle years, 2-3 later years

# Problem Project Team work

Problem  
analysis

Problem Solving + Report writing in group

Exam

Theme - framework

Each group 1-2 facilitator

Lectures

Literature

Experiment

Companies

Other experts

Learning goals,  
Knowledge  
sharing,  
Collaboration,  
Peer learning

Project management  
and planning

# Status seminars

Presentation,  
Feedback  
Reflection  
Progression

# Diversity – discipline and group aspect

'It is so exciting to work on this, we solve problems and we see things happen...' - Students from EE

'It is boring to only focus on technical things... I don't want to become nerds by studying engineering. I want to work with technology in a creative way and to do something for people...'

- Students from A&D

Diversity of physical facilitation

# Role of teaching in PBL – situated facilitation

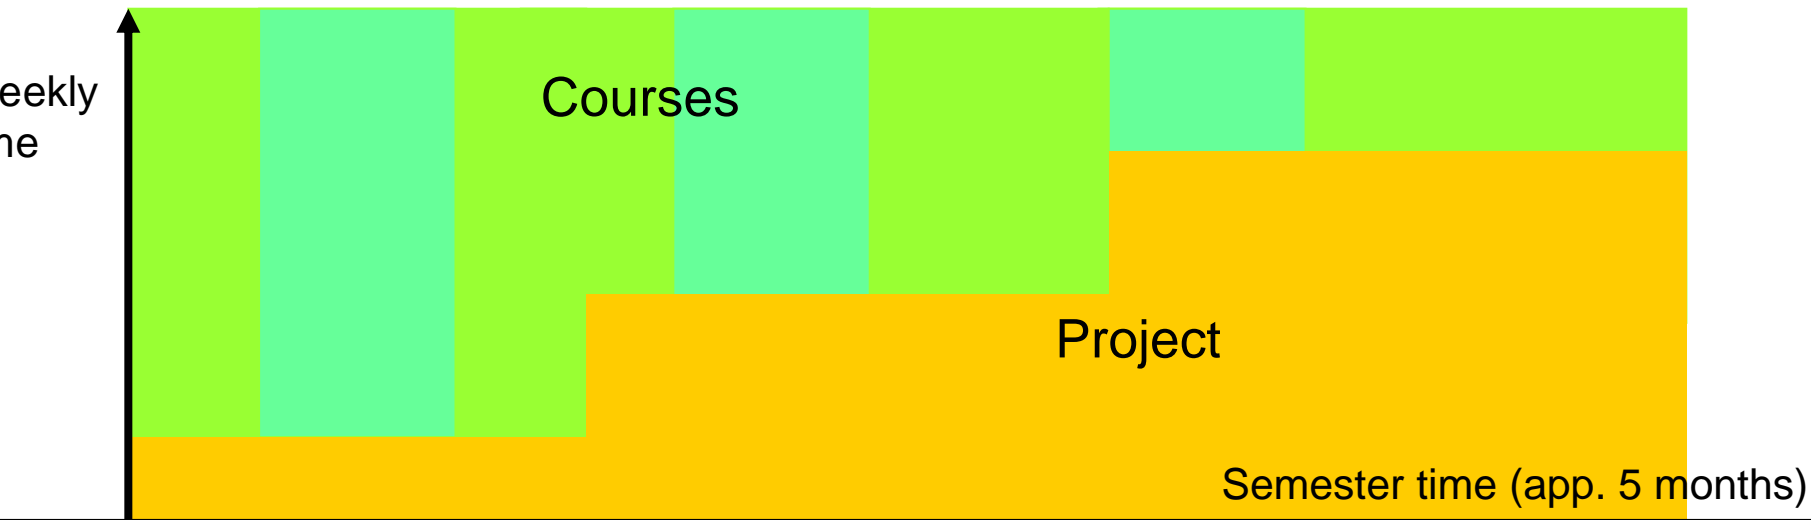

Telling students what they should learn and in what sequence they should learn it

Helping students determine on their own what they need to know and how they need to learn it

Barrow & Tamblyn 1980

## An example of Aalborg University

Before:  
Planning  
project  
proposals and  
project courses

Beginning:

- More direct guidance
- Literature, theories, methods
- Contacts with companies
- Potentials

During the process:

- Consultancy
- Comments
- Monitoring

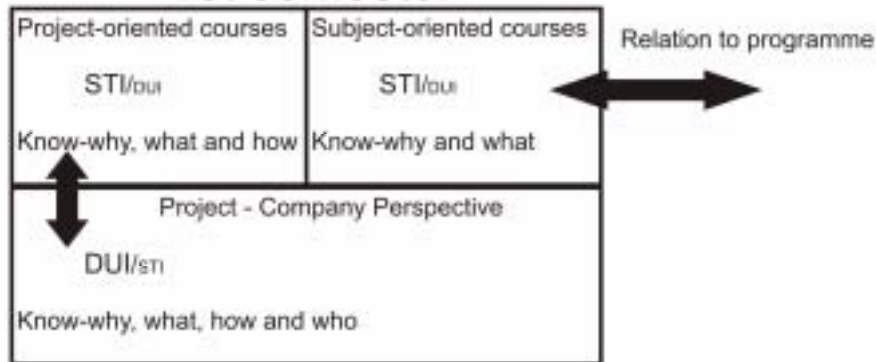

End:  
Assessing

# Facilitation and group dynamics

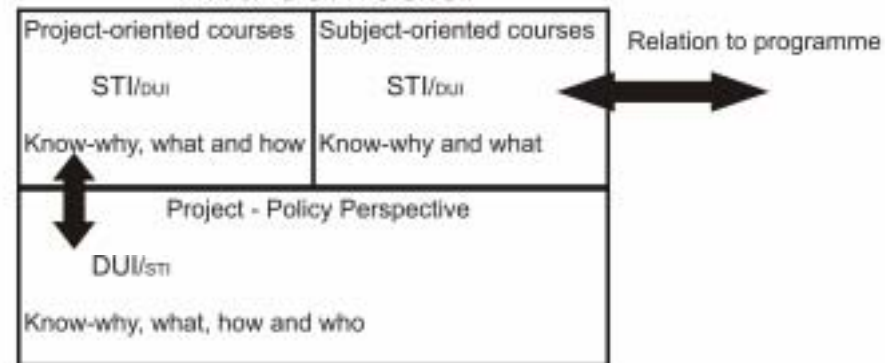

# Structure - MSc, Environmental Management

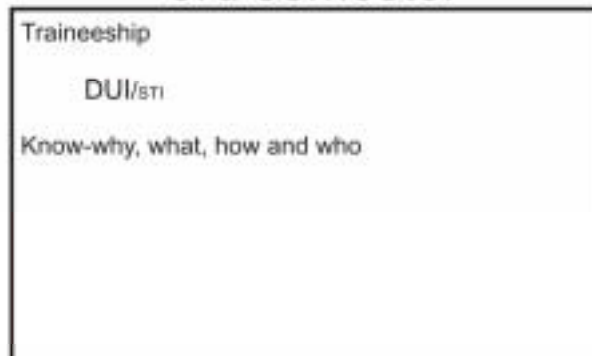

## 1st semester

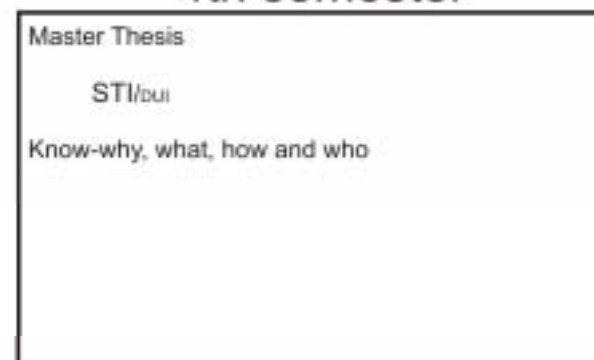

## 2nd semester

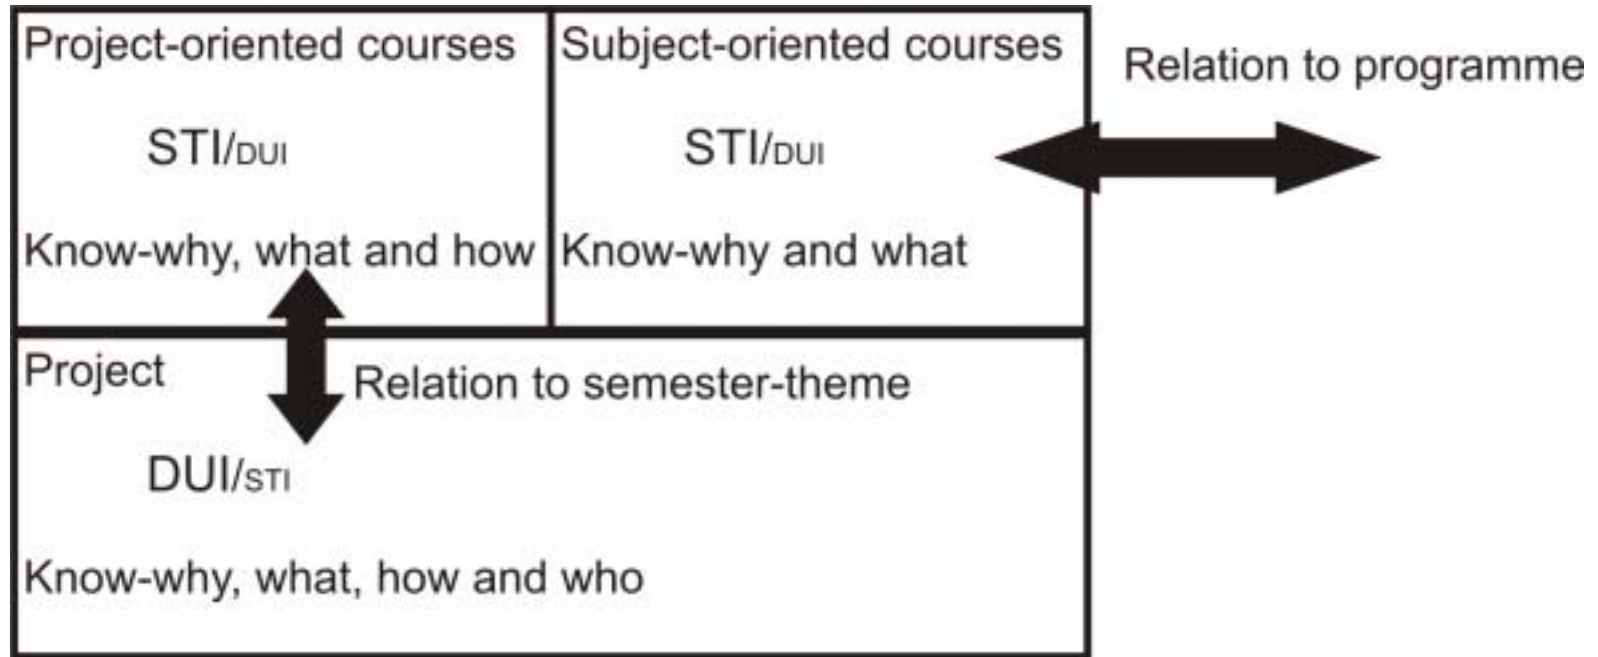

## 3rd semester

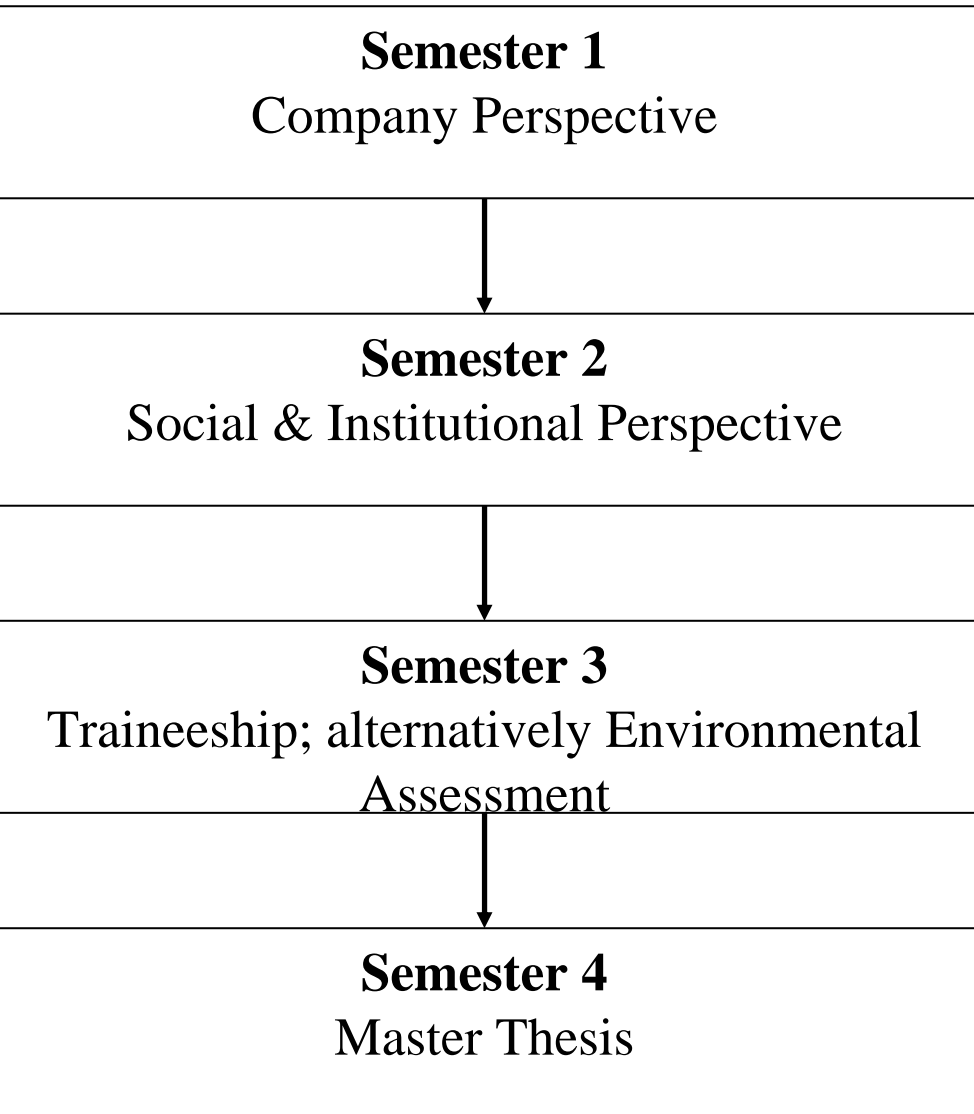

## 4th semester

# 1st semester, Company focus

<p><b>Courses (examples)</b> Corporate Environmental Management; Feasibility Studies; Organisational Theory; Research Methodology</p>
<p>Theories of Science; Policy, Institutions and Discourses; EIA, Politics of Sustainable Development; Technology Transfer, Environmental Governance &amp; Policy Instruments, International and EU Green Policies</p>
<p>Environmental Assessment; Strategic Impact Assessment, Cost-Benefit Analysis</p>
<p>No courses</p>

# **International Master Program of Environmental Management**

## **Semester 1 Theme**

**Company perspective – Environmental management industries and cleaner production and products**

### **Project focus**

**In-depth analysis of a company's environmental strategies and performance and suggests improvements in relation to production processes, the product life cycle, or management policies. At the end of the semester, a project report is submitted, presenting relevant theories and an analysis of the case study.**

### **Courses**

**Feasibility Studies 2 ECTS**

**Research Methodology 2 ECTS**

**Organisation Theory 1 ECTS**

**Approaches to environmental problem solving 2 ECTS**

**Introduction to Energy Systems 1 ECTS**

**Sustainable Energy Systems Analyses 2 ECTS**

**Fundamental Investment Theory and Excel 1 ECTS**

## Group 1: The Green Martin Projects (group 1 report)

Context and aims	Martin Professional, a producer of intelligent lighting systems seeks to develop a green profile. This project seeks to identify the aspects of Martin's activities and products that impact the environment as well as the gaps existing between Martin's present environmental work and the ISO 14001 requirements.
Research question	What are the gaps between the current environmental work of Martin Professional and the ISO 14001 standards and what are the potentials and barriers for reducing the significant environmental impacts of the company's activities and products?
Theories	The step model, Environmental Management Systems (EMS),
Research methods	<ul style="list-style-type: none"><li>• Qualitative approach for data generation – interviews with the company's representatives, on-site tour of the company, literature review of relevant materials from internet sources, scientific journals.</li><li>• Analysis of interview, Analysis of selected products by Sima Pro tool, Analysis of gap analysis questionnaires.</li></ul>
Results	Martin's activities impact the environment adversely predominantly through the factory's total energy input, emissions to air and even most importantly through the energy consumed in the use stage of the products. Other less significant environmental impacts identified related to hazards, waste, water consumption and nuisances. Compared to the ISO 14001 requirements, the company was found to possess an environmental policy, and had also done some work in relation to operational control and emergency preparedness and response. It however fell short of about approx 90% of the requirements of the ISO 14001 standards

### Group 3: Environmental Impacts of Passive Houses (group 3 report)

Context and aims	To determine how significant the choice of materials is when designing energy-efficient houses in relation to their lifecycle environmental impacts.
Research question	Controlling for energy efficiency and design, what are the estimated costs and environmental impacts related to two energy-efficient houses, conceived in accordance with either a sustainable development or an energy efficiency criteria?
Theories	Life cycle thinking, sustainable development and construction, passive house, passive and active systems, big bale building, LS/EPS Passive house
Research methods	<ul style="list-style-type: none"><li>• Case study, interviews</li><li>• Costs analysis, life cycle assessment</li></ul>
Results	The construction costs were the most persuasive element of the partial results. The BBB is significantly less expensive to construct. The use stage showed an important financial dominance over the two other stages. The global warming category revealed itself to be the most important feature to consider among the environmental categories selected in this study, and at a lesser degree nutrient enrichment. The choice in the materials is of great importance of the other stages especially in relation to the embodied energy due to transport which formed an important feature in LS/EPS impact profile

# Evidence – students learning

<b>Motivation and engagement</b>	Graff and Cowdroy 1997, Thomas 2000, Kolmos and Du, 2006
<b>Deep learning</b>	Biggs 2003
<b>Self-directed learning</b>	Du 2006a
<b>Criticality of learners</b>	Savin-Baden 2003
<b>Professional Skills improvement</b>	Dochy et al 2001, Frenay et al 2007
<b>Process skills</b>	Kolmos 1996, 1999, Du 2006, Kolmos and Du 2006, Croshwaite, 2006
<b>Interdisciplinary knowledge and skills</b>	Kjaersdam 1994, Graaff and Kolmos 2003
<b>Creativity and designing skills</b>	Schrøder 2006
<b>Professional identity and responsibility</b>	Hmelo and Evensen 2000, Kolmos 2006, Du 2006a, 2006b
<b>Self-satisfaction and meaningfulness</b>	Savin-Baden 2000, Du 2006a

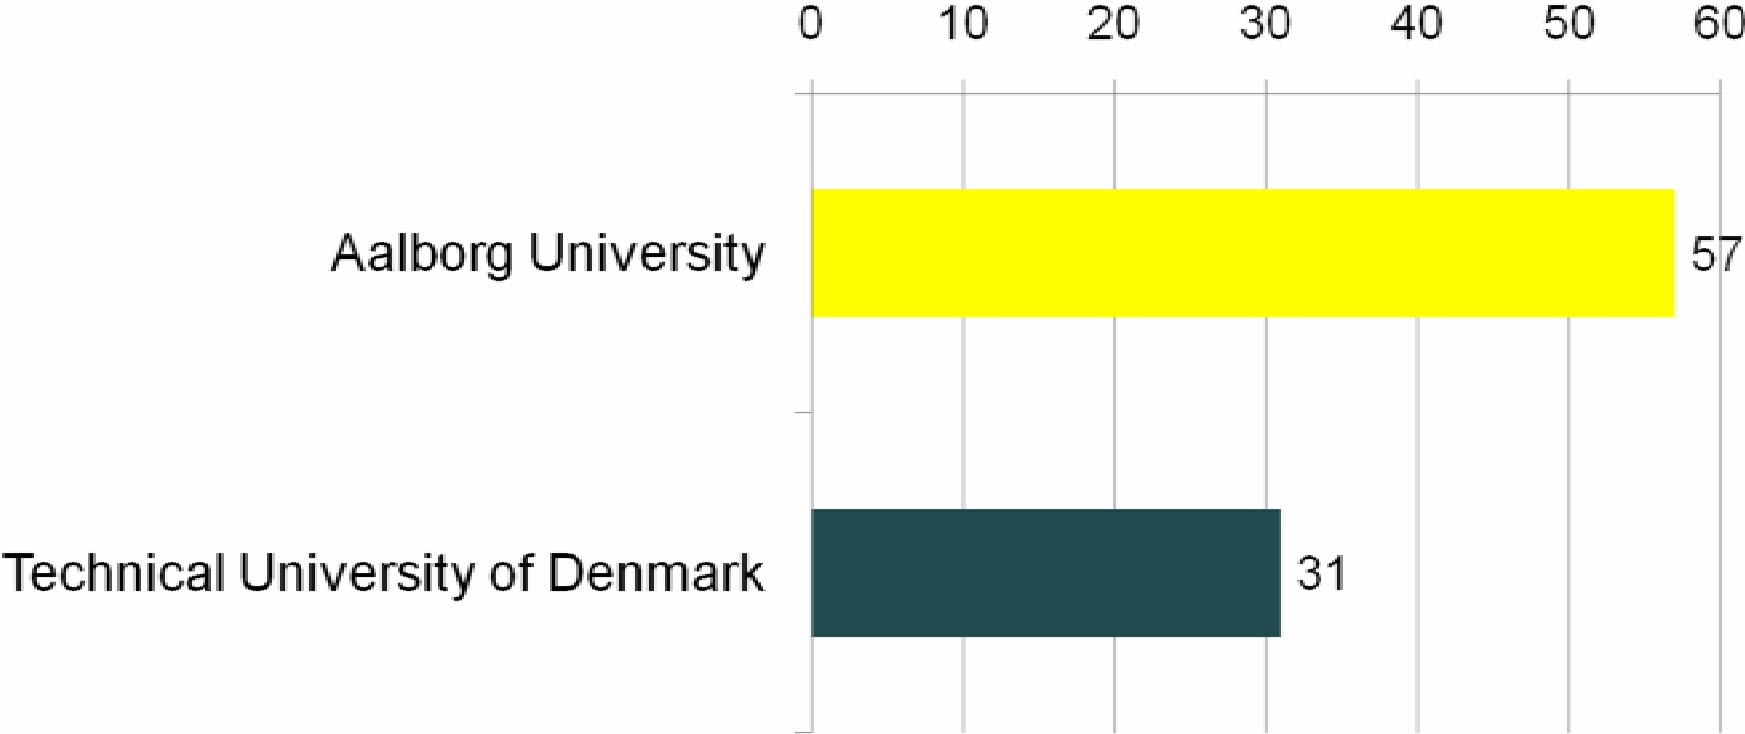

# Evaluation from Danish industry on graduates

# PBL – Regional development

PBL AAU as a good example of linking students with the local economy (OECD 2007, Puukka and Marmolejo 2008)

- Students benefit from
  - Gaining transferable skills and authentic work experiences
- University benefits from
  - gaining feedback and access to instructive cases and ideas for research and teaching
  - Improving graduate retention
  - Higher rate on-time finishing ( AAU 87% v.s 38% others in DK)
  - Lower drop-out rate (AAU lowest in DK)
  - Improved interdisciplinary collaboration among teaching staff
- Enterprises benefit from
  - A clearer picture of what the university stands for and how the students might fit in as prospective employees

# A walk around AAU Main Campus
